TECHNICAL LETTER 2021-04 03 December 2021

Subject: Acceptance of A-60 Boundary between the space containing the emergency source of power and machinery spaces of category A or those spaces containing the main source of electrical power

This technical letter provides guidance on the Administration's acceptance of an A-60 boundary between the space containing the emergency source of power (typical the emergency generator room) and machinery spaces of category A or those spaces containing the main source of electrical power typical a vessel's main engine room.

In lieu of providing, as far as practicable, a non-contiguous boundary as per SOLAS II-1/42.1.3 or II-1/43.1.3, the Administration will accept a contiguous shared boundary (with no penetrations or cable attachment) of steel or equivalent material provided with A-60 insulation on the face of the boundary facing the space "a" described below and extending 450mm beyond the area of contiguity shared by the following two spaces:

- a) the space containing the emergency source of electrical power, associated transforming equipment, the transitional source of emergency electrical power, and the emergency switchboard; and,
- b) the machinery spaces of category A or those spaces containing the main source of electrical power, associated transforming equipment, or the main switchboard.

Provided the A-60 insulation is "extending 450mm beyond the area of contiguity shared by the...two spaces", this arrangement would be acceptable.

If you have any questions on this Technical Letter please contact Regsandstandards@liscr.com.

Regards;

Anthony Dupree Jr.
