TECHNICAL LETTER 2023-01 10 January 2023

Subject: Omission of Inclining Test for Sister Vessels

SOLAS Reg II-1/5.2 states that:

“The Administration may allow the inclining test of an individual cargo ship to be dispensed with provided basic stability data are available from the inclining test of a sister ship and it is shown to the satisfaction of the Administration that reliable stability information for the exempted ship can be obtained from such basic data, as required by regulation 5-1. A lightweight survey shall be carried out upon completion and the ship shall be inclined whenever in comparison with the data derived from the sister ship, a deviation from the lightship displacement exceeding 1% for ships of 160 m or more in length and 2% for ships of 50 m or less in length and as determined by linear interpolation for intermediate lengths or a deviation from the lightship longitudinal centre of gravity exceeding 0.5% of L is found.”

This Administration, considering the longstanding application of this regulation, authorizes its Recognized Organization to dispense with an inclining test without contacting this Administration, provided the deviation of the lightship displacement and lightship longitudinal centre of gravity as determined by a lightweight survey of a ship does not exceed the values for the sister ship noted in the above SOLAS regulation.

If you have any questions on this Technical Letter please contact this office at regsandstandards@liscr.com.
